KEY ACHIEVEMENTS

- 💎 **Compliance Risk Reduction**
Reduced the risk of non-compliance and large fines and ensured smooth operation continuity for 32 stakeholders
- 💎 **Improved Forecasting Models**
Uncovered hidden multi-layer dependencies in customer ownership structures that challenged existing assumptions and led to a complete redesign of remediation prioritisation, helping prevent significant compliance exposure.
- 💎 **Proactive Network Issue Detection**
Developed and deployed a proactive network issue detection model that identified faults before customer complaints, contributing to a 15–25% reduction in reported incidents and ~20% faster resolution times, improving customer experience and operational efficiency.

EDUCATION

Doctor of Philosophy (Ph.D.), Wireless Communications, Physical Layer

Victoria University
02/2002 - 07/2007 Melbourne, Australia

Bachelor Engineering, Electrical and Electronics Engineering

Victoria University
01/1998 - 12/2001 Melbourne, Australia

SKILLS

Decision Support · Problem Solving ·
Data Visualization · Data science · Python ·
Predictive Analytics · Machine Learning ·
Statistical Modelling · AWS · SQL

TRAINING / COURSES

Statistics
University of Melbourne

Group Theory and Linear Algebra
University of Melbourne

CERTIFICATIONS

The data scientist's toolbox

SUMMARY

Data Scientist and Senior Insights Analyst with a strong track record of translating complex data into actionable insights, predictive models, and decision-support analytics that drive business outcomes.

Experienced across banking, telecommunications, and consulting, working in complex and ambiguous environments where understanding underlying structure, risk, and performance is critical.

Specialise in:

- Uncovering hidden patterns and relationships in complex datasets
- Translating analytical findings and predictive model outputs into clear, decision-ready insights
- Influencing stakeholders through data storytelling and structured reasoning
- Experienced in developing predictive analytics solutions and lightweight AWS-based deployment workflows for operational and analytical use cases.

My focus is on helping organisations move beyond reporting—bringing clarity, confidence, and insight to business and operational decisions.

EXPERIENCE

- Data Analyst/Insight analyst - Consultant

11/2024 - Present

InfoCentric -Critical Data Lineage - Teller System Migration (Banking)

Melbourne, VIC

 - Led analytical investigation of legacy teller system data structures during migration from a 50-year-old platform, ensuring continuity of 32 critical dashboards across operations and financial crime.
 - Reverse-engineered undocumented SQL logic to uncover relationships between legacy and new systems, enabling accurate interpretation of reporting outputs.
 - Translated complex behaviors into clear insights, aiding architecture, product, and delivery decision-making.
 - Identified data risks and inconsistencies, improving confidence in reporting and reducing ambiguity during a high-risk transformation program.
- Data Analyst/Insight analyst - Consultant

11/2024 - Present

InfoCentric - Customer Data Remediation (Banking)

Melbourne, VIC

 - Tools and libraries used: Python, SQL, Networkx (for graph analytics), PowerBI
- Senior Data Scientist

08/2018 - 04/2024

Telstra

Greater Melbourne Area

 - Developing predictive analytics (statistical machine learning) for various departments with notable projects:
 - Conducted Customer and Service survival analysis to identify and prioritize key churn drivers, resulting in an improved profit margin. Insights contributed to a **3–5% relative reduction in churn** within targeted segments and **improved profitability through better retention focus**.
 - Proactive Detection of broadband network issues before customer complaints: Developed a model to proactively detect network issues, leading to cost savings, increased efficiency, reduced churn, and improved brand reputation with customers.
 - Developed a model to proactively detect broadband network issues before customer complaints. Enabled earlier intervention, reducing reactive incidents and contributing to: 15–25% reduction in customer-reported faults in targeted areas and faster issue resolution times (~20% improvement).
 - Network volume usage hourly forecast and clustering customers by usage: Created a predictive model to forecast customer internet usage at nodes (CVC), enhancing capacity planning and enabling quick detection of unplanned outages.
 - Customer call analysis and forecast: Conducted in-depth analysis of customer calls to gain valuable insights and trends. Developed a forecasting model for expected call volume, optimizing agent allocation planning.
 - Analyzed customer call data and developed forecasting models for call volume. Improved forecast accuracy by 10–20%, enabling better workforce planning and more efficient agent allocation, reducing over/under staffing.
 - Additional skills: Effective communication with business stakeholders to understand and translate their requirements into data/statistical problems.
 - Expertise in choosing appropriate data sources, ETL processes, and model building to address business challenges effectively.
 - Continuously engaging with stakeholders to ensure alignment with project goals and deliverables.
 - Worked with AWS-based analytical workflows to support lightweight deployment and operationalisation of predictive analytics solutions.

EXPERIENCE

Insight Analyst

08/2017 - 06/2018

Telstra

Melbourne, Australia

- Developing dashboards for intrusion detection based on analysis of gigabytes of internet data
- Analyzed large-scale network traffic data to support intrusion detection and improve visibility of network behaviour.
- Explored anomaly detection approaches (e.g., clustering and pattern analysis) to better understand traffic patterns and identify unusual activity, contributing to ongoing detection strategy discussions.
- Developed dashboards and visualisations that enabled analysts to monitor traffic patterns, investigate anomalies, and make faster, data-informed decisions.
- Collaborated with analysts to translate complex data into practical insights for operational use.
